

Kwik-Fit Structural Pipe Fittings are made of malleable iron and are designed to make the building of handrails and pipe structures fast and easy. Using only simple hand tools, complex pipe configurations can be produced quickly and efficiently. When you use Kwik-Fit Structural Pipe Fittings, assembly is intuitive. Fittings slip on the pipe, and the stainless steel set screws can be tightened using a simple hex wrench.

Kwik-Fit applications include handrails, guardrails, greenhouses, displays, racks, safety barriers, playground equipment, store fixtures, boat docks and more! There is no welding and structures are easily reconfigured if your design changes.

With easy ordering, friendly expert service, and quick shipping, you can get started on your pipe project in no time. Kwik-Fit fittings are durable enough for industry yet simple and cost effective enough for the home hobbyist.

Kwik-Fit Fittings are stocked to fit schedule 40 pipe sizes 1 inch through 1 1/2 inches. All fittings come with stainless steel set screws as standard. Technical data for Kwik-Fit fittings may be obtained by visiting www.bluewater-mfg.com.

Hex Wrench

How To Order Kwik-Fit Fittings

Select your fitting series number and use the pipe size chart to determine your fitting size. For example: to order a 90 Degree Elbow for schedule 40 1 1/4 inch pipe, your complete fitting part number is 1047.32. For 1 1/2 inch pipe, your part number is 1047.40.

Kwik-Fit pipe size	32	40
Nominal pipe size*	1 1/4"	1 1/2"
Pipe OD	1.660"	1.900"
Fitting ID	1.730"	1.970"

*The nominal bore varies with the thickness of the pipe.
